

The Beck Industrial mixer is designed and built entirely around feedback from concrete producers.

DURABILITY & PERFORMANCE

“Our customers have shaped and inspired every single improvement and innovation. We take a lot of pride in rising to their challenge to provide the best product in the industry.”
– Frank Beck

DURABILITY & PERFORMANCE

Proven Design

- AR200 Fabricated drum head with VORTEX mix efficiency head blades for dramatically improved wear life, fewer balls, easier clean out, and consistent concrete quality.
- The most durable, stress and corrosion resistant pedestals in the industry.
- Lower drum angle for better mixing consistency, and uniform drum wear.
- All Beck Industrial mixers are powered by genuine ZF P7300, PK7500, or CML12 Transmissions.
- Reinforced “Dovetail” rear fender section for longer life and crack resistance
- Lateral Cantilever Ladder design with ground-parallel rungs for the safest climbing angle and unmatched durability.
- Available Hardox charge hopper

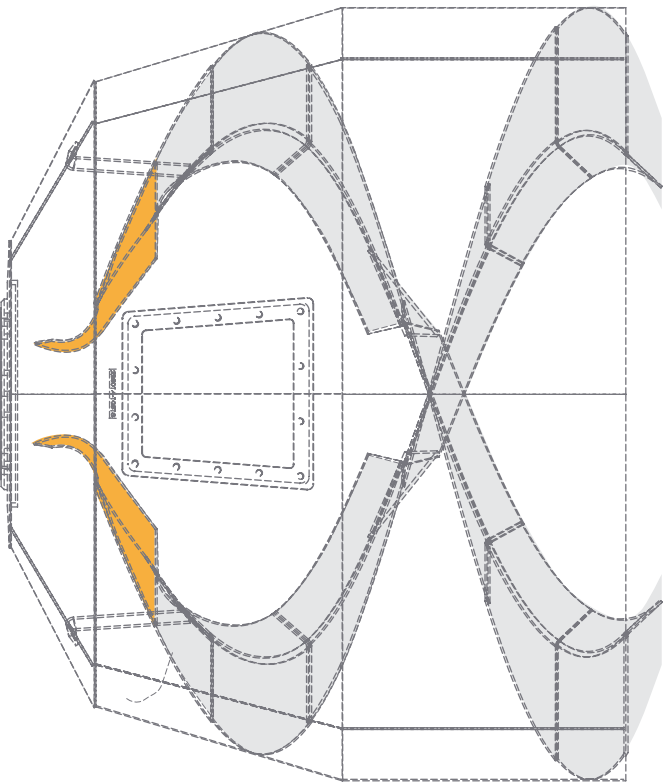

Reinforced “Dovetail” Rear Fender

HARDOX®

Performance Features

- Lower center of gravity for better driving stability. 3" – 4" lower than industry leaders.
- Most replacement parts compatible in fit-up with readily available industry standard parts.
- Expanded 48" charge hopper with super paver collector and main chute for the most efficient loading and unloading of even the most challenging mix designs.
- Rear Pedestal washout holes to prevent concrete buildup around rollers.
- Extensive customization options including electronic control platform, gear box, water tank size & location, fenders, chutes and mounting locations, hose routing and plumbing, and many more.
